Grand danois	DNA-Pelsvariant Lokus H (Harlekin)	VGL, Animalgenetics, Paw Print Genetics, Healthgene, DDC, Laboklin	08-09-2020	
Irish softcoated wheaten terrier	HUU - Hyperuricosuri (SLC2A9)	Animal DNA Diagnostics, Antagene, CAG (Center for Animal Genetics), Certagen, Embark, Genomia, GenSol, Laboklin, Orivet, PawPrint Genetics	15-12-2022	
Irish softcoated wheaten terrier	Protein Losing Nephropathy (PLN)	Agrotis, BioBank AS, Certagen, Embark, EVG Diagnostics, Laboklin, VHL Genetics, Wisdom Panel, Zoolyx	15-12-2022	DNA-testen for PLN undersøger mutationer i to forskellige gener (NPHS1 and KIRREL2), og det gør denne test lidt særlig. Hunde, der er homozygote (bærer to kopier af mutationerne) i begge gener, har en signifikant forøget risiko for at udvikle PLN. Men hunde, der er bærere i begge gener, har også en vis forøget risiko. Bærere er altså ikke nødvendigvis symptomfri. Det er også muligt, at der findes andre miljømæssige eller genetiske faktorer, der kan påvirke udviklingen af sygdommen.

Irish softcoated wheaten terrier	Microphthalmia (RBP4)		15-12-2022	Nedarvningsmønsteret for Microphthalmia (RBP4) er lidt specielt. Hvalpene bliver kun syge, hvis både moderen og hvalpene selv, er homozygote for mutationen i RBP4 (bærer to kopier af sygdomsmutationen). Homozygote hvalpe efter to forældre, der begge er anlægssbærere, bliver ikke syge (som de jo ville blive ved en "almindelig" autosomal recessiv nedarvning). Det er derfor især vigtigt at tæver, der er homozygote for mutationen i RBP4, ikke bruges i avl.
Irish softcoated wheaten terrier	Paroxysmal Dyskinesia (PxD)		15-12-2022	
Irsk setter	CLAD (Canine Leukocyte Adhesion Deficiency)	Antagene, Genomia, Laboklin, Optigen	17-01-2017	
Irsk setter	rcd1/PRA	Antagene, Genomia, Laboklin, Optigen	17-01-2017
